**Sources:**
1. The World Bank 2017
Moldova’s overall risk level against the assessed areas is **very low**.

Among the three EIRA risk areas breach of State obligations and discrimination between foreign and domestic investors continue to be lower compared to unpredictable policy and regulatory change.

Moldova’s performance is very good on three of the EIRA indicators, and it is good on one indicator. Its score on the indicators rule of law (90), regulatory environment and investment conditions (85), and management of decision-making processes (83) continues to be very good. The performance on foresight of policy and regulatory change has dropped by 1 point and now stands at 63.

On a more detailed level, Moldova’s overall sub-indicator performance is very good. The highest-scoring sub-indicators are regulatory effectiveness and respect for property rights, with 100 points each. There are no changes to the scores on transparency (85), institutional governance (81), management and settlement of investor-State disputes (80) and restrictions on FDI (70). On communication of vision and policies its performance has gone down by 2 points. This now has a score of 63, the same as robustness of policy goals and commitments.

Moldova continues to provide attractive conditions for investors. Attention should again be given to better communicating the country’s vision and policies.
STRENGTHS

The key strategic objectives of Moldova are ensuring the security of supply, promoting the sustainability of the energy sector and fulfilling the prerequisites for market liberalisation. In 2018, Moldova took significant steps to enhance energy security and diversify its resource base. In particular, progress was made on the development of a significant gas pipeline project. Moreover, national legislation came into force to scale up investment in renewable energy and transpose the principles set in the EU’s Guidelines on State aid for environmental protection and energy 2014-2020. The legislation supports development of small-scale, community-based renewable energy projects as a means to achieve local autonomy and distributed energy generation. Additionally, the new Law no. 139 of 2018 “On Energy Efficiency” provides the necessary legal basis for the adoption of measures such as the rehabilitation of public buildings, the introduction of energy efficiency criteria in public procurement, and the promotion of energy performance contracts.

The Energy Strategy 2030 envisages data collection and monitoring mechanisms. The responsibility for implementing the energy goals belongs to various bodies, including ministries, the National Energy Regulatory Agency (ANRE), and the Energy Efficiency Agency. The latter is mandated to make country-wide efforts towards achieving the country’s energy efficiency and renewable targets. Following its restructuring in 2018, the Energy Efficiency Agency is also responsible for providing financial support to relevant projects through the State budget, and from regional and international financial markets.

AREAS FOR IMPROVEMENT

The short- and mid-term targets in the Energy Strategy 2030 must be supplemented with the inclusion of long-term objectives and specific timelines for their achievement. This is particularly the case for renewables, where the target set for 2020 has already been achieved.

To fully realise the impact of the new renewable energy law, secondary regulations and implementation plans underpinning it should be devised, after impact assessment and deliberation with experts and stakeholders. They should clarify outstanding matters such as documentation for tendering procedure and eligibility for small renewable electricity producers.

QUICK FACTS

The main strategic document for the energy sector is the Energy Strategy of the Republic of Moldova until 2030 (adopted in 2012). In October 2018, a revised version of the Energy Strategy 2030 was submitted for public consultation.

Moldova ratified the Paris Agreement in 2017 and submitted its first NDCs.

The Energy Strategy 2030 was submitted for public consultation (adopted in 2012). In October 2018, a revised version came into force.

The short- and mid-term targets in the Energy Strategy 2030 must be supplemented with the inclusion of long-term objectives and specific timelines for their achievement. This is particularly the case for renewables, where the target set for 2020 has already been achieved.

To fully realise the impact of the new renewable energy law, secondary regulations and implementation plans underpinning it should be devised, after impact assessment and deliberation with experts and stakeholders. They should clarify outstanding matters such as documentation for tendering procedure and eligibility for small renewable electricity producers.
**INDICATOR 3**

**Regulatory environment and investment conditions**

**QUICK FACTS**

Law no. 174 of 2017 “On Energy” complies with the EU acquis regarding the role and competences of the ANRE.

Equal treatment to domestic and foreign investors is guaranteed under Law no. 81 of 2004 “On Investments in Entrepreneurial Activity”.

**STRENGTHS**

In December 2018, Decision no. 334 “On the Approval of the Regulation for the Organisation and Functioning of ANRE” was adopted. It reaffirms the status of ANRE as a separate legal entity and reinforces its political and functional independence. The ANRE is headed by a Board of Directors, appointed by the Parliament following an open competition. The Board members cannot seek or accept instructions from private actors and public authorities, including the Parliament. The Director General employs ANRE’s staff in accordance with regulations approved by the Management Board, and on the basis of defined, transparent and non-discriminatory qualification criteria. Vacancy announcements are posted on its website.

The transposition of core EU energy legislation has resulted in the adoption of competitive and liberalised market principles, especially in the electricity and natural gas fields. These reforms have enhanced the investment environment of the country. Law no. 10 of 2016 “On the Promotion of the Use of Energy from Renewables Sources”, in force since 2018, provides for new support mechanisms for large renewable projects. It also guarantees non-discriminatory access to the grid and priority dispatch. Capacity auctions are planned for 2019. The recently approved regulation on tendering provides an initial framework for organising auctions that grant “eligible producer” status to large investors. This is done through the establishment of unequivocal, objective, transparent and non-discriminatory procedures, conditions and criteria.

**AREAS FOR IMPROVEMENT**

**SCORE 85**

Special attention has been given to the improvement of the ANRE’s work. In line with the recommendation made in 2018, the provisions concerning its independence should be effectively applied on the ground, especially in terms of managing tariff policies and curbing monopolistic behaviour of certain actors in energy procurement.

Efforts should be intensified to ensure the much-anticipated unbundling of the supply from the transmission system in the country’s gas sub-sector. To this end, a detailed action plan must be prepared, consulted with the civil society and foreign partners, and duly published.

**INDICATOR 4**

**Rule of law**

**QUICK FACTS**

Moldova ratified the Energy Charter Treaty in 1996.

Moldova ratified the Convention on the Settlement of Investment Disputes between States and Nationals of Other States in 2011.

**STRENGTHS**

The Code of Civil Procedure no. 225-XV of 2003 stipulates the general jurisdiction for hearing contractual disputes. Alternative dispute resolution mechanisms are envisaged in national legislation. Prior exhaustion of local remedies is not a prerequisite for arbitration. As part of a wider policy to promote alternative dispute resolution mechanisms, the Supreme Court of Justice has devoted significant efforts to unifying court practice of recognition and enforcement of foreign arbitral awards and aligning it with the international standards. There have been no retroactive changes to laws, detrimentally affecting foreign investors, in the last five years.

In general, the expropriation procedures are governed by Law no. 488 of 1999 “On Expropriation for a Cause of Public Utility” and detailed by Government Decision no. 660 of 2006. The expropriating authority has to value the property both at market value and normative value. Cash compensation at market rate or normative rate, whichever is higher, is paid to the affected party prior to expropriation. The 2018 amendments in the Law “With Regard to Natural Gas” and the Law “With Regard to Electricity” set forth additional conditions for lawful takings in the case of energy-related projects. They also list the criteria for determining the compensation owed due to damage caused by system operators in the exercise of the rights of use and servitude. Moldova is a party to various international treaties and conventions in the field of intellectual property rights. It also has in place domestic laws and BITs that recognise and protect intellectual property rights as a form of investment.

**AREAS FOR IMPROVEMENT**

**SCORE 90**

Significant efforts have already been undertaken to improve the judicial framework and processes. However, as recommended in 2018, the introduction of timeframes for the examination of cases and the delivery of judgments will ensure effective access to justice. Consequently, it will help the country secure compliance with its obligations under the European Convention for the Protection of Human Rights and Fundamental Freedoms.
